

Texas Tech University Consent to Participate in Research

The Development of Emotions and School Achievement

Study BioSocial Interplay in Development Lab Investigator:

Zhe Wang, Ph.D.

You and your child are invited to be part of a research study investigating the role of emotions in learning and problem solving. Please read this consent form carefully as it contains important information about this study and what to expect if you decide to participate. Please ask any questions that you may have before agreeing to be in the research. If you decide to participate, you will be asked to sign and will receive a copy of the form.

I. Purpose of this Research

The purpose of this research is to help us better understand when and how certain emotions can facilitate vs. hurt our ability in learning and problem solving.

II. Procedures

This study involves a 3 hour visit to our research lab located in the College of Human Sciences Building on Texas Tech campus. Activities that you and your child will do during the lab visit include playing some computerized games, solving some math and reading problems, and filling out some questionnaires. There will be a follow-up study with your family 1-year later and another follow-up study 2-year later. We will also ask you to provide the contact information of your child's math teacher who we will invite to provide additional information about your child's learning and achievement development.

During each lab visit, the orders in which you and your child will participate in these three parts of activities are described in the table below:

Child	0 - 10 mins	10 - 70 mins	70 - 130 mins		130 - 180 mins
	Assent	Computer games	Achievement Assessment		Questionnaires
Parent	0 - 10 mins	10 - 50 mins	50 - 110 mins	110 - 170 mins	170-180 mins
	Consent	Achievement Assessment	Questionnaires	Computer games	Debrief

- a. *Computer Games* (approximately 60 minutes). You/your child will play brief attention, memory, and number games on a computer. Each game has different rules, and we will give you the instructions prior to each game. While you/your child play the computer games, your heart rate and your eye moving patterns will be recorded. We will place 7 small sticky patches on your/your child's front and back to collect heart rate activity. This procedure is similar to that used in a doctor's office and is not harmful. We will also use eye-tracking technology to trace your eye movement to help us better understand how you solve problems. We will also video-record this session to help us analyze the information we collect from you and your child at a later time. After these games are completed, the sticky patches will be removed.
- b. *Questionnaires* (approximately 30 minutes for your child and 40 minutes for you). You and your child will be asked to complete a series of online questionnaires. A research assistant

will answer any questions you have about the forms and will assist you and your child with the completion of the forms, if you wish.

- c. *Achievement Assessment* (approximately 60 minutes for your child and 40 minutes for you). We will administer an achievement assessment where we will ask you to solve some reading and math problems.

Follow-ups: The study is going to examine your child's development over the next two years. We will conduct a follow-up study with you and your child 1 year from now, and again 2 year from now. The procedures for these follow ups will be like those in this initial study. Approximately 10 months from now, we will be contacting you again to schedule your next follow-up study. Your continuous participation in our study is crucial in helping us understand how the various educational-related outcomes develop over time. You will be compensated for your participation in each of these follow-up studies (please see compensation section for detail).

III. Risks and Benefits

There are no foreseeable risks beyond those encountered during daily life. The heart rate procedure is similar to that done in a doctor's office and is not harmful. The heart rate equipment is disposable. If you or your child have allergy to alcohol, please inform us so that we can use alternative procedure to prepare your skin for the procedure.

There are no foreseeable direct benefits for you. No promise or guarantee of benefits has been made to encourage you to participate in this study. In a scientific sense, however, this research study will give developmental and educational psychologists more information about the development of learning-related emotions and how they influence learning and problem solving in the education processes.

IV. Confidentiality

Efforts will be made to keep your study-related information confidential. Information from each individual will be identified by code number only. Information linking your identifiable information and code number will be kept on a password protected desktop. You will be video recorded during the lab procedure. This allows us to go back at a later date to analyze the collected data. Videos will be stored on a password protected computer in the research lab. Access to the research records will be limited to Dr. Wang, her trained research assistants on this project, the university review board responsible for protecting human participants, regulatory agencies, and sponsors and funding agencies. In any report we may publish, we will not include any information that will make it possible to identify a participant. Your identifying information will be permanently erased at the end of this project.

V. Compensation

You will be compensated with \$80 for your participation in the initial study. We will give you this compensation at the end of your laboratory visit. This compensation will be repeated in the 1st year and 2nd year follow ups.

VI. Participant Rights

You may withdraw from the study at any time. If you choose to withdraw from the study, there will be no penalty to you, and you will not lose any benefits to which you are otherwise entitled.

VII. Approval of Research

An Institutional Review Board responsible for human subjects research at Texas Tech University reviewed this research project and found it to be acceptable, according to applicable state and federal regulations and university policies designed to protect the rights and welfare of participants in research. This consent form is not valid after (01/31/2019).

VIII. Contacts and Questions

If you have any question or need clarification about the study, please call us at (806)742-2991 or email us at BioSocialDevLab@gmail.com, a research assistant will be happy to answer any question you have. You may also ask any questions you have now.

The principal investigator of this study is Dr. Zhe Wang. If you have any additional questions, concerns or complaints about the study, or if you would like to talk about issues such as research-related injuries, you may contact her at (806)834-5065 or zhe.wang@ttu.edu.

If the researchers cannot be reached, or if you would like to talk to someone other than the researchers about (1) questions, concerns or complaints regarding this study, (2) research participant rights, or (3) other human subjects issues, please contact the Human Research Protection Program office at hrpp@ttu.edu.

IX. Parent's Permission

Do you give us the permission to contact you about the 1-year and 2-year follow up studies?

☐ Yes

☐ No

If Yes, please indicate your preferred contact:

☐ Email

☐ Phone Call

☐ Mail

Do you give us the permission to contact you about a new study conducted by Dr. Yoojin Chae and Dr. Zhe Wang from the Department of Human Development and Family Studies at TTU?

☐ Yes

☐ No

Printed Name of participant

Printed Name of child

Signature of participant

Date and time

X. Investigator/Research Staff

I have explained the research to the participant before requesting the signature above. There are no blanks in this document. A copy of this form has been given to the participant.
